

STORAGE VISIONS® 2018

October 22-23, 2018 at the Hyatt Regency, Santa Clara, CA

AN ENTERTAINMENT STORAGE ALLIANCE™ EVENT

Avinash Lakshman, CEO and Founder, Hedvig

TITLE

Why Enterprises are Moving to Software Defined Infrastructures

ABSTRACT

Software defined infrastructures operate independently of any hardware-specific dependencies and are programmatically extensible. In today's enterprise, the explosion of data and data sovereignty laws require infrastructures to be resilient and location transparent. Software infrastructures also allow for significantly improving operational efficiency. Ability to standardize on a platform for a wide variety of workloads with off the shelf x86 and ARM based architectures is the key to making this happen. In this session,

Avinash Lakshman CEO and founder of Hedvig will discuss what is driving the move towards software defined infrastructures and how companies can leverage data management capabilities for on premise, hybrid and multi cloud environments designed to deliver these capabilities to enterprises.

BIOGRAPHY

Avinash Lakshman is the CEO & Founder of Hedvig. Before starting Hedvig, Avinash built two large distributed systems: Amazon Dynamo and Apache Cassandra. As the pioneer of NoSQL systems, Avinash is passionate about using distributed systems to disrupt a storage space that hasn't seen any real innovation over the last decade.
