

STORAGE VISIONS® 2018

October 22-23, 2018 at the Hyatt Regency, Santa Clara, CA

AN ENTERTAINMENT STORAGE ALLIANCE™ EVENT

Gaurav Yadav, Founding Engineer and Product Manager, Hedvig

TITLE

Storage in the Cloud Era

ABSTRACT

We have officially entered the cloud-era where vast amounts of data are being generated and consumed from all parts of the world. This technology shift is making data management harder and information extraction eternal. Public cloud vendors are pushing enterprise solutions to make hardware resource consumption simple, highly optimized, and cost-effective. Every data center component from compute, network, and storage is witnessing disruption in its architecture.

In this talk, I'll discuss the different expectations from the storage layer along with the evolving business needs in the modern cloud era. I will also describe one of our Global airline customer's hybrid cloud architecture to understand what role storage can play in addressing the challenges of ubiquitous data.

BIOGRAPHY

Gaurav Yadav is a founding engineer and product manager at Hedvig. He has more than 10 years of experience working in storage, databases, distributed systems, and virtualization. His previous experience includes working with a search-engine startup, Google and Oracle.
